DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/1/2005 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 09-176769A (JP'769).

JP'769 teaches an aluminum alloy for extrusion molding comprising (in wt%): 3.0-6.0% Si, 0.1-1.0% Mn, 0.4-1.0% Mg, optionally one or more from: 0.15-2.0% Cu, 0.05-0.30% Cr, 0.1-1.0% Fe, 0.01-0.10% Ti, and typically 0.00-0.01% Zn (see examples Table 2-1), which overlaps the instant ranges of Si, Cr, Fe, and Zn, and touches the boundary/is a close approximation of the presently claimed maximums of Mn and Cu.

Though the minimum range of Mg taught by JP'769 of 0.4% does not fall within the presently claimed maximum of 0.39% Mg, a prima facie case of obviousness exists where the claimed

Art Unit: 1742

ranges and prior art ranges do not overlap but are close enough that one skilled in the art would have expected them to have the same properties. *Titanium Metals Corp. of America v. Banner*, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985). Because 0.4% Mg is held to be close enough that one skilled in the art would have expected them to have the same properties as 0.39% Mg, it is held that JP'769 has created a *prima facie* case of obviousness of the presently claimed invention. Overlapping ranges have been held to be a *prima facie* case of obviousness, see MPEP § 2144.05.

Concerning the instant claim language of “excelling in caulking properties”, because the prior art teaches an overlapping alloy composition, processed in a substantially similar manner, then substantially the same properties, such as caulking properties, are also expected to result (see also above discussion).

When the Examiner has established a *prima facie* obviousness, the burden then shifts to the applicant to rebut. *In re Dillon*, 919 F.2d 688, 692, 16 USPQ2d 1897, 1901 (Fed. Cir. 1990) (en banc). Rebuttal may take the form of “a comparison of test data showing that the claimed compositions possess unexpectedly improved properties... that the prior art does not have, that the prior art is so deficient that there is no motivation to make what might otherwise appear to be obvious changes, or any other argument.. that is pertinent.” *Id.* at 692-93; USPQ2d 1901. Applicant has not clearly shown specific unexpected results with respect to the prior art of record or criticality of the instant claimed range (wherein said results must be fully commensurate in scope with the instantly claimed ranges, etc. see MPEP 716.02 d).
